

CYBERSECURITY TRAINING PROGRAM

Complete Course Curriculum • 3 Months

MindGigs Cybersecurity Training

Executive Summary

This 12-week cybersecurity training program provides a structured and practical pathway for beginners to develop foundational knowledge and hands-on skills in cybersecurity. The curriculum progresses from networking and system fundamentals to security monitoring, threat awareness, and basic incident response, concluding with a guided capstone project.

Target Outcomes

Graduates will be prepared for:

- Entry-level cybersecurity roles
- Security internships
- IT support roles with security responsibilities

Students will develop skills in:

- Networking and system fundamentals
- Basic threat detection and monitoring
- Vulnerability awareness
- Incident response fundamentals
- Security documentation

Six Progressive Learning Phases

The curriculum is structured into six carefully designed phases, each building upon the previous to create practical cybersecurity competency.

Phase 1: Networking & Security Foundations

Weeks 1–2

#	Module / Topics
1	Introduction to Cybersecurity
2	Networking Fundamentals
3	OSI Model & Protocol Security
4	Basic Web Concepts & Security Risks
5	Core Security Concepts
6	Cybersecurity Career Pathways

Phase 2: Linux Fundamentals

Weeks 3–4

#	Module / Topics
7	Linux Basics & File System
8	File Management & Text Processing
9	Users, Groups & Permissions
10	Process & Service Management
11	Linux Networking Tools
12	Log Analysis

Phase 3: Security Operations Fundamentals

Weeks 5–7

#	Module / Topics
13	Security Monitoring & SIEM Basics → Monitoring concepts → Logs and alerts → Introductory exposure to Splunk
14	Incident Response Fundamentals

	→ Incident lifecycle → Basic response steps → Reporting process
15	Threats, Attacks & OSINT Basics → Common attack techniques → Introduction to reconnaissance → Awareness of attacker behavior
16	Scanning, Enumeration & Vulnerability Basics → Basic scanning concepts → Identifying vulnerabilities → Introductory tools usage

Phase 4: Ethical Hacking Foundations

Weeks 8–9

#	Module / Topics
17	Web Security Fundamentals & OWASP Top 10 → Common web vulnerabilities → Secure practices
18	Vulnerability Reporting & Documentation Basics → Writing findings → Basic reporting format → Communicating risks

Phase 5: Automation & Security Frameworks

Weeks 10–11

#	Module / Topics
19	Security Automation with Python & Bash → Basic scripting concepts → Simple automation tasks
20	Security Frameworks & Capstone Project → Overview of MITRE ATT&CK → Security documentation practices → Final guided capstone project

Capstone Project

Students will complete a guided cybersecurity investigation scenario simulating a basic security incident.

Activities

- Analyze provided logs
- Identify suspicious behavior
- Recognize basic indicators of suspicious activity
- Document findings

Deliverables

- Incident summary report
- Basic analysis findings
- Recommended actions

Tools & Technologies (Introductory Exposure)

Students will gain hands-on exposure to the following industry-standard tools:

Category	Tools Covered
Network Analysis	Wireshark, Nmap
SIEM (Introductory)	Splunk
Operating Systems	Linux (Ubuntu / Kali), Windows
Scripting / Automation	Python, Bash
Frameworks	MITRE ATT&CK, OWASP, Cyber Kill Chain

Learning Methodology

Learn-by-Doing

- Guided labs and demonstrations
- Hands-on exercises

Progressive Learning

- Step-by-step skill development from fundamentals to applied security

Practical Exposure

- Real-world tools used at an introductory level
- Scenario-based learning tied to actual security incidents

Target Audience & Prerequisites

Ideal For

- Beginners with no prior cybersecurity experience
- Students and fresh graduates
- Career changers from non-IT or IT backgrounds

Prerequisites

- Basic computer knowledge (file management, web browsers)
- Willingness to learn and commitment to hands-on practice

Delivery Structure

Item	Details
Duration	12 Weeks
Total Sessions	Approximately 72 Sessions

Program Benefits

Upon completion, students will have:

- Strong cybersecurity fundamentals
- Practical exposure to real-world tools
- Basic incident analysis experience
- Security documentation skills
- Foundational preparation for cybersecurity career pathways
